PROFESSIONAL SUMMARY

Software Engineer with expertise in Python, machine learning, deep learning, and natural language processing. Developed hands-on experience in full-stack development and end-to-end AI systems, including Transformer-based text summarization and song recommendation system, along with scalable web applications using Flask, React, JavaScript, and SQL/MongoDB databases. Passionate about applying data-driven and software engineering principles to develop intelligent, efficient, and real-world application.

Education

- Bachelor of Technology in Computer Science and Engineering (AI and DS) Vadodara, Gujarat
Parul University - CGPA : 8.36 Expected Graduation: 2026

Technical Skills

Programming : Python

Data Analysis : Pandas, NumPy, Matplotlib, Seaborn

Machine Learning : Scikit-learn, Supervised and Unsupervised Learning, Deep Learning, NLP

NLP and Generative AI : Transformers, Hugging Face, LLM Basic

Web Deployment : HTML, CSS, JavaScript, React, Flask, Node.JS, REST APIs

Database Technologies: MySQL, MongoDB (Fundamental)

Development Tools and Platforms: Git, VS Code, GitHub.

Concepts : Data Structures and Algorithms, Software Development Lifecycle, OOPS, DBMS.

Soft Skills

Communication, Team Collaboration, Problem Solving, Time Management, Adaptability.

Projects

Text Summarization using PEGASUS Transformer Project | GitHub

- Engineered an NLP text summarization system leveraging the PEGASUS Transformer model, encompassing an end-to-end pipeline for data preprocessing, model training, and performance evaluation. Utilized Python, ML frameworks, HuggingFace, NumPy, and Pandas to enhance text summarization accuracy and efficiency.

Music Recommendation System Project | GitHub

- Architected a content-based music recommendation system employing TF-IDF and cosine similarity algorithms to deliver personalized song suggestions based on lyrical analysis. Implemented using Python, Flask, Pandas, NumPy, alongside front-end technologies HTML, CSS, and JavaScript to ensure seamless user interaction and experience.

Test Forest Fire ML Project Project | GitHub

- Designed a predictive machine learning model to assess forest fire risks by analyzing environmental and weather datasets. Employed Python, Scikit-learn, and Pandas to provide accurate risk predictions, enabling the implementation of proactive forest management strategies.

Certifications

- Oracle Certified Professional For Data Science - Oracle
- Oracle Certified Professional For Analytics - Oracle
- Full Stack Developer Bootcamp - Frontend to Backend -GeeksForGeeks
